

National Exams May 2013
11-CS-2-Engineering in Society – Health and Safety
3 hours duration

Notes:

1. If doubt exists as to the interpretation of any question, the candidate is urged to submit with the answer paper, a clear statement of any assumptions made.
2. This is a Closed Book exam. Candidates may use one of two calculators, the Casio or Sharp approved models.
3. Any five questions constitute a complete paper. Only the first five questions as they appear in your answer book will be marked.
4. All questions are of equal value.
5. Write your answers in point-form whenever possible, but fully. Show all calculations.

Marking Scheme (marks)

- | | | | |
|----|--------|---------|---------|
| 1. | (i) 6, | (ii) 7, | (iii) 7 |
| 2. | (i) 7, | (ii) 6, | (iii) 7 |
| 3. | (i) 6, | (ii) 7, | (iii) 7 |
| 4. | (i) 7, | (ii) 6, | (iii) 6 |
| 5. | (i) 7, | (ii) 7, | (iii) 6 |
| 6. | (i) 6, | (ii) 6, | (iii) 8 |
| 7. | (i) 6, | (ii) 6, | (iii) 8 |

National Exams May 2013
11-CS-2-Engineering in Society - Health and Safety

1. (i) State your understanding of the terms, safety engineering and safety practice.
(ii) Show by means of a diagram your understanding of multiple factor theory in the context of incident and accident theories.
(iii) Explain the concepts of (a) reactive approach for deriving preventive actions from accident and (b) proactive approach for developing preventive actions before accidents occur. Use diagrams to explain.
2. (i) State the various sources of hazards in industry.
(ii) State the priorities in order of importance for selecting controls for hazards.
(iii) State the steps that should be followed for the effective use of warning devices.
3. (i) What are the safeguarding procedures for machines and tools.
(ii) Explain the importance of handle design for hand tools, such as hack saw to fit all sizes of male and female population.
(iii) State the important factors that should be considered for portable power tool controls.
4. (i) State the measures that should be taken to control fire hazards from common industrial processes, such as, welding and cutting.
(ii) State the factors that must be considered in providing fire protection of human life in industry.
(iii) Show by diagram typical action taken in response to a fire.
5. (i) State the steps followed in the conduct of a safety audit process.
(ii) What is the purpose of accident investigation? State the criteria used to decide which accidents to investigate.
(iii) State the classic steps followed in accident investigation.
6. (i) State the detrimental effects (other than hearing loss) from noise.
(ii) What is your understanding of audiology and audiogram?
(iii) An industrial worker is exposed to the following noise levels during an 8-hour work shift: 80 dBA for 4 hrs, 85 dBA for 2hrs, 90 dBA for 1 hr and 95 dBA for 1 hr. Calculate the combined effect or the daily noise dose, (OSHA permissible exposure levels for duration/day are: 80 dBA-16 hrs, 85 dBA-8 hrs, 90 dBA -4 hrs and 95 dBA – 2 hrs.). Is the daily noise acceptable? If this is not, then what should be done?
7. A shipping department packager in a small manufacturing plant placed a gear on a layout table and sprayed it with a rust preventative before packing it for shipment. After the employee had sprayed several gears, the spray gun became clogged and failed to operate. The employee tried to clean the clogged spray gun tip. At that instant, the gun discharged, and the employee's left thumb was severely lacerated and subsequently had to be amputated.
 - (i) Determine the cause of the accident.
 - (ii) State the corrective actions required.
 - (iii) Suggest the follow-up action required.
